

Safety and replanning vs prediction horizon, by planner

Prediction raises clean finishes for every planner (Voronoi 23% → 64%, PRM 43% → 71%, Visibility Graph 32% → 61%, 0 → 100 ms) at the cost of more replans for Voronoi (7 → 13 per run). Horizon = how far ahead (ms) obstacles are projected; 0 = no prediction. Event trigger, 20 ms checks, 200 scenarios per point.
