

# Safety and replanning vs prediction horizon, by planner

Prediction raises clean finishes for every planner (Voronoi 41% → 65%, PRM 44% → 72%, Visibility Graph 34% → 62%, 0 → 100 ms) at the cost of more replans for Voronoi (9 → 17 per run). Horizon = how far ahead (ms) obstacles are projected; 0 = no prediction. Event trigger, 20 ms checks, 200 scenarios per point.
